

Recorded Gazebo navigation checks

12 September 2026 (Dubai) | TurtleBot3 Waffle, ROS2 Humble, Nav2

Orange: recorded odometry. Blue: requested destinations. Grey: warehouse shelves. Each run starts at the charging dock, (1, 1).

The plots replay archived v2 plans (L1-01, L2-01, L3-01; trial 0) in a fresh headless world for each case. Displayed trajectories are sampled at approximately 0.5 simulated-second intervals from the raw ROS recordings. This is execution validation of saved plans, with one run per selected case; no new language-model calls or semantic grades were generated.

Source: [gazebo-20260911T213643Z/](#). The earlier attempt with a missing ground-plane search path and subsequent startup timeout remains in [gazebo-20260911T173623Z/](#); it is not represented as a successful navigation trial.
